WEKA

- Data Mining Software in Java
- Weka is a collection of machine learning algorithms for data mining tasks. The algorithms can either be applied directly to a dataset or called from your own Java code. Weka contains tools for data pre-processing, classification, regression, clustering, association rules, and visualization. It is also well-suited for developing new machine learning schemes.

How to install WEKA

- Go to <http://www.cs.waikato.ac.nz/ml/weka>
- Click the Download button

Association

Association rules

- ❖ With association rules, there is no "class" attribute
- ❖ Rules can predict any attribute, or combination of attributes
- ❖ Need a different kind of algorithm: "Apriori"

Here are some association rules for the weather data:

1. outlook = overcast ==> play = yes
2. temperature = cool ==> humidity = normal
3. humidity = normal & windy = false ==> play = yes
4. outlook = sunny & play = no ==> humidity = high
5. outlook = sunny & humidity = high ==> play = no
6. outlook = rainy & play = yes ==> windy = false
7. outlook = rainy & windy = false ==> play = yes
8. temperature = cool & play = yes ==> humidity = normal
9. outlook = sunny & temperature = hot ==> humidity = high

Outlook	Temp	Humidity	Windy	Play
sunny	hot	high	false	no
sunny	hot	high	true	no
overcast	hot	high	false	yes
rainy	mild	high	false	yes
rainy	cool	normal	false	yes
rainy	cool	normal	true	no
overcast	cool	normal	true	yes
sunny	mild	high	false	no
sunny	cool	normal	false	yes
rainy	mild	normal	false	yes
sunny	mild	normal	true	yes
overcast	mild	high	true	yes
overcast	hot	normal	false	yes

		support	confidence
1. outlook = overcast	==> play = yes	4	100%
2. temperature = cool	==> humidity = normal	4	100%
3. humidity = normal & windy = false	==> play = yes	4	100%
4. outlook = sunny & play = no	==> humidity = high	3	100%
5. outlook = sunny & humidity = high	==> play = no	3	100%
6. outlook = rainy & play = yes	==> windy = false	3	100%
7. outlook = rainy & windy = false	==> play = yes	3	100%
8. temperature = cool & play = yes	==> humidity = normal	3	100%
9. outlook = sunny & temperature = hot	==> humidity = high	2	100%
10. temperature = hot & play = no	==> outlook = sunny	2	100%

- ❖ Itemset set of attribute-value pairs, e.g.

humidity = normal & windy = false & play = yes

support = 4

- ❖ 7 potential rules from this itemset:

If humidity = normal & windy = false ==> play = yes
 If humidity = normal & play = yes ==> windy = false
 If windy = false & play = yes ==> humidity = normal
 If humidity = normal ==> windy = false & play = yes
 If windy = false ==> humidity = normal & play = yes
 If play = yes ==> humidity = normal & windy = false
 ==> humidity = normal & windy = false & play = yes

support confidence

4	4/4
4	4/6
4	4/6
4	4/7
4	4/8
4	4/9
4	4/14

- ❖ Generate high-support itemsets, get several rules from each
- ❖ Strategy: iteratively reduce the minimum support until the required number of rules is found with a given minimum confidence

Information

verbose -- If enabled the algorithm will be run in verbose mode.

numRules -- Number of rules to find.

lowerBoundMinSupport -- Lower bound for minimum support.

classIndex -- Index of the class attribute. If set to -1, the last attribute is taken as class attribute.

outputItemSets -- If enabled the itemsets are output as well.

car -- If enabled class association rules are mined instead of (general) association rules.

doNotCheckCapabilities -- If set, associator capabilities are not checked before associator is built (Use with caution to reduce runtime).

removeAllMissingCols -- Remove columns with all missing
