

BBM 205 - Discrete Structures Butunleme Exam
Date: 21.1.2016, Time: 13:30 - 15:00 (90 minutes)

Ad Soyad / Name:

Öğrenci No /Student ID:

Şube /Section: 1-2: Haşmet Gürçay (Morning, Afternoon)
3: Lale Özkahya

Question	1	2	3	4	5	Total
Points	20	20	20	20	20	100
Grade						

1. (20 points) In a company, 51% of the adults are males. One adult is randomly selected for a survey involving credit card usage.
 - (a) (10 points) Find the prior probability that the selected person is a male.
 - (b) (10 points) It is later learned that the selected adult was smoking a cigar. Also, 9.5% of males smoke cigars, whereas 1.7% of females smoke cigars. Use this additional information to find the probability that the selected adult is a male.

2. (20 points) Assume that the function f , g and h take only positive values. Show that, if $f(n) = \Theta(g(n))$ and $g(n) = \Theta(h(n))$, then $f(n) = \Theta(h(n))$.

3. (20 points) Prove that, if a binary tree of height h has t terminal vertices, then $\log t \leq h$.

4. (20 points) Show that a simple graph is a tree if and only if it is connected, but the deletion of any of its edges makes the graph disconnected.

5. (20 points) Use mathematical induction to show that given $n+1$ non-negative integers none exceeding $2n$, there is at least one integer that divides another integer in this set.
