

BBM205 Midterm Exam I

Time: 16:00-18:00

11 November 2020

Question:	1	2	3	4	5	6	7	Total
Points:	16	18	12	14	15	10	15	100
Score:								

1. Assume that you have a statement $P(x)$ for a number x and you aim to show the following:

$$\exists x(P(x) \implies Q(x))$$

Which of the proof ideas would be valid to prove the above statement?

- (a) (4 points) Show there exists an x such that if $Q(x)$ is false, then $P(x)$ is false.
 - (b) (4 points) Assume that there exists an x such that $P(x)$ is true and $Q(x)$ is false and derive a contradiction.
 - (c) (4 points) Find an x such that $Q(x)$ is true or $P(x)$ is false.
 - (d) (4 points) Assume that for all x , $P(x)$ is true and $Q(x)$ is false, and derive a contradiction.
2. Determine by using a truth table whether the following equivalences are true or false.

- (a) (6 points)

$$(x \implies y) \equiv (x \vee \neg y)$$

- (b) (6 points)

$$(x \implies y) \equiv (\neg x \implies \neg y)$$

- (c) (6 points)

$$(x \implies y) \equiv ((y \wedge x) \vee \neg x)$$

3. (12 points) Show that the number below is irrational.

$$\sqrt{x}$$

Take the value of x depending on your meeting number as follows:

$$(\text{Meeting Number}, x) = \{(1, 11), (2, 7), (3, 5), (4, 3)\}$$

Say, if you are in meeting 1, then you will take $x=11$, and similarly for others.

4. (a) (5 points) Determine the following numbers by showing all your work:

$$2^{2020} \pmod{7}, \quad 3^{2020} \pmod{7}, \quad 4^{2020} \pmod{7}$$

- (b) (5 points) Determine the following numbers by showing all your work:

$$2^{2020} \pmod{8}, \quad 3^{2020} \pmod{8}, \quad 4^{2020} \pmod{8}$$

- (c) (4 points) Write a necessary and sufficient condition for the multiplicative inverse of a number k to exist in modulo n .

5. The bipartite graph G has parts A and B with labelled vertices as below:

$$A = \{10 \cdot a + 1, 10 \cdot a + 2, 10 \cdot a + 3, 10 \cdot a + 4, 10 \cdot a + 5\},$$

$$B = \{10 \cdot a + 6, 10 \cdot a + 7, 10 \cdot a + 8, 10 \cdot a + 9, 10 \cdot a + 10\},$$

The (undirected) edge set is defined as

$$E(G) = \{xy : x \in A, y \in B, \gcd(x, y) = 1\}$$

In this graph, find

- (a) (5 points) a maximal matching and explain why it is maximal.
(b) (5 points) a maximum matching
(c) (5 points) a matching that is maximal but not maximum (if it exists).

Take the value of "a" depending on your meeting number as follows:

$$(\text{Meeting Number}, a) = \{(1, 0), (2, 1), (3, 2), (4, 3)\}$$

Say, if you are in meeting 2, then you will take $a = 1$, and similarly for others.

6. (10 points) Exhibit two nonisomorphic, connected graphs with x vertices and x edges. Take the value of x depending on your meeting number as follows:

$$(\text{Meeting Number}, x) = \{(1, 4), (2, 5), (3, 6), (4, 7)\}$$

Say, if you are in meeting 3, then you will take $x=6$, and similarly for others.

7. In this question, take the value of "a" depending on your meeting number as follows:

$$(\text{Meeting Number}, a) = \{(1, 2), (2, 3), (3, 2), (4, 3)\}$$

Say, if you are in meeting 4, then you will take $a=3$, and similarly for others.

- (a) (6 points) Find the smallest positive integer n , for which the following is true.

$$n! \geq a^n$$

- (b) (9 points) Call the number found in the first part k . Show by using induction that

$$n! \geq a^n \text{ for all } n \geq k.$$
