

BBM205 Final Exam Solutions

Time: 10:00-12:00

January, 12 2021

Question:	1	2	3	4	5	Total
Points:	20	20	20	20	20	100
Score:						

1. (20 points) Solve the recurrence relations below for $n \geq 0$, where in each part x denotes your group number:

a)

$$a_n = a_{n-1} + n, \quad a_0 = x$$

b)

$$a_n = (x + 3)a_{n-1} + 2^n, \quad a_0 = 1$$

c)

$$\sqrt{a_n} = \sqrt{a_{n-1}} + 2\sqrt{a_{n-2}}, \quad a_0 = a_1 = 1$$

2. (20 points) Prove the following for a simple graph on n vertices:

a) If for every pair of vertices x and y , $\deg(x) + \deg(y) \geq n - 1$, then G is connected.

b) Show by finding an example that if the condition in part (a) is replaced with $\deg(x) + \deg(y) \geq n - 2$, then G may not be connected.

3. (20 points) a) Prove that if p is a prime number with $p > 3$, then either $p \equiv 1 \pmod{3}$ or $p \equiv -1 \pmod{3}$.

b) We call two primes with difference 2 twin primes, such as 11 and 13. Use part (a) to show that all pairs of twin primes $\{p, q\}$ with $p, q > 5$ are disjoint pairs.

4. (20 points) Show by using induction on n that the formula for A^n below is correct for the given matrix A and $n \geq 1$.

$$A = \begin{bmatrix} -2 & -9 \\ 1 & 4 \end{bmatrix}, \quad A^n = \begin{bmatrix} 1 - 3n & -9n \\ n & 1 + 3n \end{bmatrix}.$$

5. (20 points) In the following questions, pick the correct answer.

- (a) If for a graph with n vertices and e edges, $e \leq 3n - 6$, then G is planar.
 True False
- (b) Any graph that does not contain a triangle is 2-colorable.
 True False
- (c) Every graph with a Hamilton cycle has an Euler tour.
 True False
- (d) If all vertices in a simple graph have degree at least 2, then G is not connected.
 True False
- (e) For two integers a and b , if $a=bq+r$ ($q \neq 0$), then $\gcd(a,b)$ is equal to:
 $\gcd(a,q)$ $\gcd(b,r)$ $\gcd(q,r)$ $\gcd(a,r)$
