1. The notation $\exists! x \ P(x)$ denotes

"There exists a unique $x$ such that $P(x)$ is true."

What are the truth values of these statements?

a) $\exists! x \ P(x) \rightarrow \exists x \ P(x)$ \hspace{1cm} True

b) $\forall x \ P(x) \rightarrow \exists! x \ P(x)$ \hspace{1cm} False

2. Prove that if $n$ is a positive integer, then $n$ is even if and only if $7n + 4$ is even.

$n$, even $\rightarrow 7n + 4$, even:

Since $n = 2k$ for some $k$, integer

$7n + 4 = 7 \cdot 2k + 4 = 2(7k + 2)$ also even.

$7n + 4$ even $\rightarrow n$, even

$7n + 4 = 2m$ where $m$, integer

$7n = 2m - 4 = 2(m - 2)$, even

Since $2 \nmid 7$, $2 \mid n$. $n$ is even.
(2 pts)

3. Let p, q and r be the propositions
   p: You get an A on the final exam
   q: You do every exercise in the book
   r: You get an A in this class

Write these propositions using p, q and r and logical connectives.

a) You get an A in this class, but you do not do every exercise in this book.
   \[ r \land \neg q \]

b) You get an A on the final exam, you do every exercise in this book, and you get an A in this class.
   \[ p \land q \land r \]

c) To get an A in this class, it is necessary for you to get an A on the final exam.
   \[ r \rightarrow p \]

d) Getting an A on the final exam and doing every exercise in this book is sufficient for getting an A in this class.
   \[ (p \land q) \rightarrow r \]

(2 pts)

4. Show that this conditional statement is a tautology by using truth table:
   \[ (p \land q) \rightarrow (p \rightarrow q) \]

<table>
<thead>
<tr>
<th>p</th>
<th>q</th>
<th>p \land q</th>
<th>p \rightarrow q</th>
<th>(p \land q) \rightarrow (p \rightarrow q)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>0</td>
<td>0</td>
<td>1</td>
<td>1</td>
</tr>
<tr>
<td>1</td>
<td>0</td>
<td>0</td>
<td>0</td>
<td>1</td>
</tr>
<tr>
<td>0</td>
<td>1</td>
<td>0</td>
<td>1</td>
<td>1</td>
</tr>
<tr>
<td>1</td>
<td>1</td>
<td>1</td>
<td>1</td>
<td>1</td>
</tr>
</tbody>
</table>
(1 pt)

5. Prove that if \( x \) is rational and \( x \neq 0 \), then \( \frac{1}{x} \) is rational.

If \( x = \frac{a}{b} \) for two integers \( a, b \) with \( \gcd(a, b) = 1 \),

then \( \frac{1}{x} = \frac{b}{a} \) also rational.

(3 pts)

6. Determine the truth value of the statement \( \forall x \exists y(xy = 1) \)
   if the domain for the variables consists of
   a) the nonzero real numbers
   b) the nonzero integers
   c) the positive real numbers.

   a) \( \forall x, \exists y = \frac{1}{x} \) so that \( xy = 1 \). \( \text{True} \)

   b) If \( x = 2, y = \frac{1}{2} \) so that \( xy = 1 \). But \( y \notin \mathbb{Z}^+ \) \( \text{False} \)

   c) \( \forall x, y = \frac{1}{x} \) so that \( xy = 1 \). \( \text{True} \)
7. State the converse, contrapositive, and inverse of each of these conditional statements.

   a) When I stay up late, it is necessary that I sleep until noon. \( p \implies q \) \( \neg p \implies \neg q \)

   b) A positive integer is a prime only if it has no divisors other than 1 and itself. \( p \implies q \) \( \neg p \implies \neg q \)

   Converse
   a) If I sleep... then I stay up late.
   b) If no divisors other than 1... then prime.

   Contrapositive
   a) If I do not sleep... then I do not stay up late.
   b) If there is any divisor other than 1 and itself, then a positive integer is not a prime.

   Inverse
   a) If I do not stay up late, then I do not sleep....
   b) If a positive integer is not a prime, then it has some divisor other than 1 and itself.

8. Let \( \varphi(x) \) be the statement \( x+1 \geq 2x \). If the domain consists of all integers, what are these truth values?

   a) \( \varphi(-1) \) b) \( \varphi(1) \) c) \( \forall x \varphi(x) \)
   d) \( \exists x \varphi(x) \) e) \( \forall x \exists y(x) \) f) \( \exists x \forall y(x) \)

   a) \(-1+1=0 \neq -2\) b) \(1+1 \neq 2\) c) As in (a), \( \exists x \varphi(x) \) where \( x = -1 \), so false

   d) \( \varphi(1) \) is true as in (a). e) \( \varphi(1) \) is false f) \( \varphi(1) \) is false as in (b). (b). True
9. Find a counterexample, if possible, to these universally quantified statements, where the domain for all variables consists of all real numbers.
   a) $\forall x \ (x^2 \neq x)$  
   b) $\forall x \ (|x| > 0)$  
   c) $\forall x \ (x^2 \neq 2)$

   a) False.  
      If $x = 0$, $x^2 = x$  

   b) False.  
      If $x = 0$, $|x| 
eq 0$.  

   c) False.  
      If $x = \sqrt{2}$, $x^2 = 2$.
